

# BSAI – 7<sup>th</sup> Semester

PRESENTATION 4 – WRITING PROCESS

7<sup>th</sup> October 2025

# WRITING - A PROCESS

- ▶ Systematic, recursive sequence of various stages - prewriting, drafting, revising, editing, and publishing
- ▶ Each stage involves different organizational operations
- ▶ Purpose of this process
  - ▶ 1. to refine ideas
  - ▶ 2. to achieve coherence and cohesion
- ▶ Prewriting, outlining, drafting, revising, editing, publishing

# STAGES OF THE WRITING PROCESS

- ▶ **1. OUTLINING**
- ▶ **2. PARAPHRASING**
- ▶ **3. SEQUENCING**

# 1. OUTLINING

## ► SIGNIFICANCE

- 1) A framework to organize macro and micro-level ideas
- 2) Comes before drafting
- 3) Ensures logical flow (clear arrangement/order of ideas)
- 4) Topic relevance (all points are related to the main topic)
- 5) Structural unity (all parts fit together)

## ► PURPOSE

- 1) To maintain conceptual clarity
- 2) Smooth flow of the argument
- 3) Organization of the composition

# Identifying Problems with a Poor Outline

## Topic: Artificial Intelligence in Daily Life

### I. Introduction

- Definition of robots
- History of mobile phones
- Future of transportation

### II. Importance of AI

- AI is used in video games
- People like social media
- Some AI systems are expensive
- AI can think like humans (sometimes)

### III. Types of AI

- Weak AI and Strong AI
- Self-driving cars are fun
- Machine learning needs big data
- AI is dangerous for jobs
- Many people use Google Maps

### IV. Conclusion

- AI is good but also bad
- The weather is changing
- Students should study hard

# PROBLEMS IDENTIFIED

- Lacks logical flow:** Ideas jump randomly between unrelated points (e.g., “mobile phones” and “transportation” in introduction).
- Poor topic relevance:** Mentions “weather” and “students studying,” unrelated to AI.
- No structural unity:** Points under each heading mix unrelated subtopics (e.g., AI uses + cost + social media).

## 2. PARAPHASING

- ▶ Reconstruction of source information
- ▶ Same meaning is expressed using different lexical (vocabulary) and syntax (Grammar)
- ▶ Original idea is retained
- ▶ **SIGNIFICANCE**
- ▶ Comprehension, integrity, and originality in writing
- ▶ **PROCESS**
  1. Comprehend the source idea fully
  2. Rephrase using synonyms and different sentence structures
  3. Preserve the original meaning
  4. Cite the source if required
- ▶ **TYPES**
  1. Structural Paraphrase - change grammar
  2. Lexical Paraphrasing - replace words with synonyms
  3. Mixed Paraphrasing - combine 1 & 2

# PARAPHRASING EXERCISES

- ▶ **Original Sentence:**

- ▶ Artificial Intelligence is transforming the way humans interact with technology.

- ▶ **Structural Paraphrase:**

The interaction between humans and technology is being transformed by Artificial Intelligence.

- ▶ **Lexical Paraphrase:**

AI is changing how people communicate and work with technological systems.

- ▶ **Mixed Paraphrase:**

The in

- ▶ Here are **3 sample sentences** for a **paraphrasing exercise** (for AI students):

1. Artificial Intelligence helps computers make decisions without human involvement.
2. Deep learning models require large amounts of data to perform accurately.
3. AI-powered systems are increasingly being used in healthcare for diagnosis and treatment.

# SEQUENCING

- ▶ Arrangement or order of ideas / information / data for clarity and coherence
- ▶ In research, it ensures clarity of the arguments
- ▶ It helps the reader to trace the logical flow of the content - from Introduction to Conclusion
- ▶ It enhances the depth, quality, objectivity, and accuracy of the research
